

# Heartfelt House

A 20-room guest house developed as a "home away from home" for families of patients being treated at PeaceHealth Sacred Heart Medical Center at Riverbend or University District.

The design creates smooth transitions between indoor and outdoor spaces. The main entry landscape evokes a front yard feel by hugging the walkway with plants and integrating a large stormwater rain garden into the experience.

Moving through the building to the courtyard, the materials and scale of the design emulate the feeling of stepping out into a backyard. Small covered patios located near the guest rooms provide a place to sit and rest. Play equipment in the courtyard gives younger guests a place to have fun and enjoy the space like a home.
